

RETTA

polinomio di
1° grado.

$$* A(x_A; y_A) \quad B(x_B; y_B) \quad y = f(x)$$

$$\boxed{\frac{x - x_A}{x_B - x_A} = \frac{y - y_A}{y_B - y_A}}$$

$$(x - x_A)(y_B - y_A) = (x_B - x_A)(y - y_A)$$

$$(y_B - y_A)x + (x_A - x_B)y + y_A x_B - y_A x_A + y_B x_A - x_A y_B = 0$$

pongo: $y_B - y_A = a$
 $x_A - x_B = b$
 $y_A x_B - x_A y_B = c$

$$\boxed{ax + by + c = 0}$$

equazione della
retta in forma
implicita.

$$* ax + by + c = 0$$

$$by = -ax - c$$

$$\boxed{b \neq 0}$$

$$y = -\frac{a}{b}x - \frac{c}{b}$$

pongo $-\frac{a}{b} = m \quad -\frac{c}{b} = q$

$$y = mx + q$$

coefficiente
angolare $(-\frac{a}{b})$

$$\text{quoto} \quad \left(-\frac{c}{b}\right)$$

$$\boxed{y = mx + q}$$

equazione retta
in forma esplicita.

Esempi

1) Scrivere eq. retta dati m e q :

Utilizzo la forma esplicita.

2) Scrivere rette passante per A, B :

Utilizzo la forma implicita.

3) Scrivere eq. retta \parallel ad una retta data e passante per A :

Utilizzo forma esplicita

ES

$$\boxed{R: 2x + 3y - 7 = 0}$$

$$P(1; 3)$$

Scrivere eq. retta \parallel R e passante per P :

$$m_R = m_S \quad m_R = -\frac{2}{3} \quad m_S = -\frac{2}{3}$$

$$y = -\frac{2}{3}x + \frac{7}{3}$$

| X | y |
|---|---------------|
| 2 | 1 |
| 0 | $\frac{7}{3}$ |
| | 3 |
| | 5 |

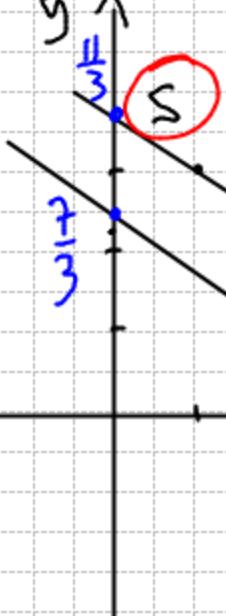

$$S: y = m_S x + q \quad y = -\frac{2}{3}x + 9$$

$$3 = -\frac{2}{3}(1) + q$$

$$q = 3 + \frac{2}{3}$$

$$q = \frac{11}{3}$$

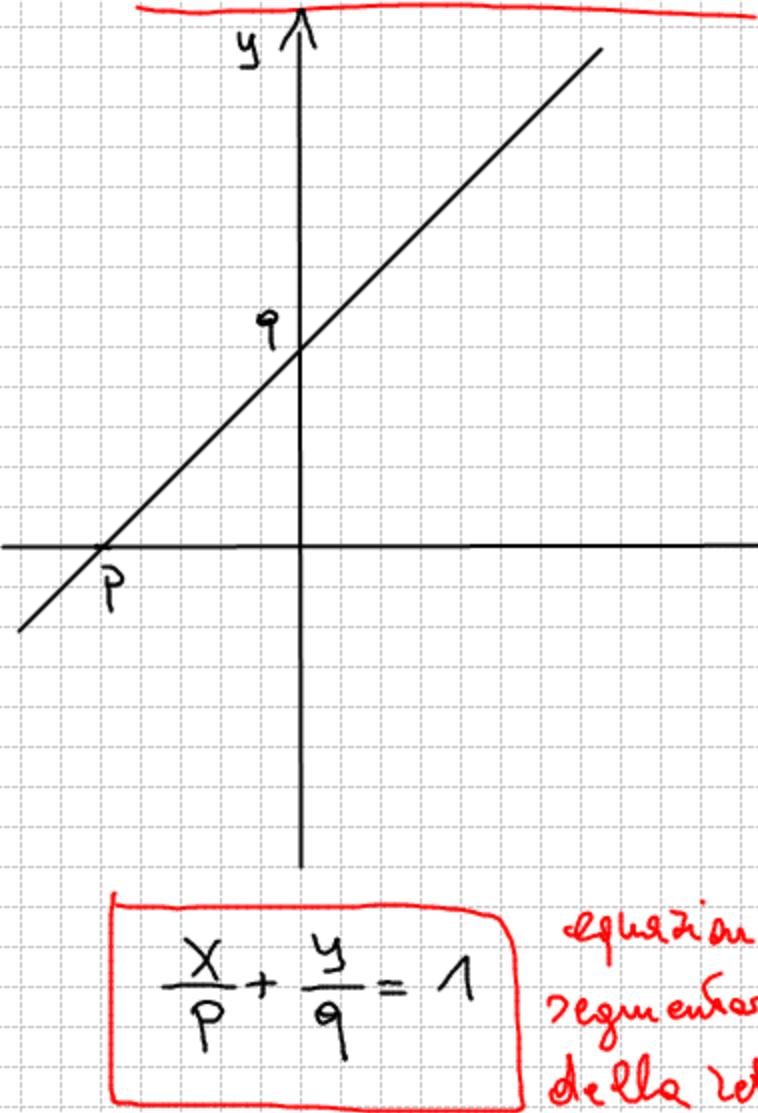

$$\boxed{y = -\frac{2}{3}x + \frac{11}{3}}$$

| X | y |
|---|---|
| 1 | 3 |
| 4 | 1 |

2

FORMA SEGMENTARIA

$$A(p; 0)$$

$$B(0; q)$$

$$\frac{x - x_A}{x_B - x_A} = \frac{y - y_A}{y_B - y_A}$$

$$\frac{x - p}{0 - p} = \frac{y - 0}{q - 0}$$

$$\frac{x - p}{-p} = \frac{y}{q}$$

$$\frac{x}{p} + \frac{y}{q} = 1$$

ESEMPIO

Scrivere la retta $3x+2y-7=0$ in forma segmentaria.

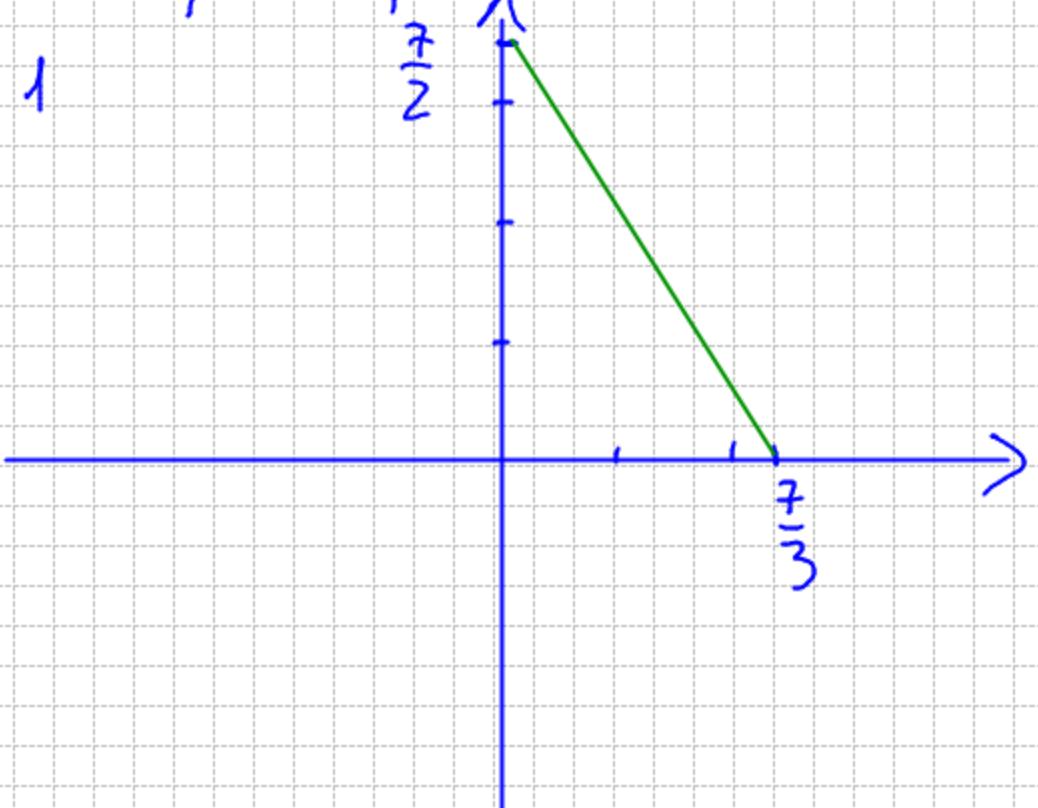

$$3x+2y=7$$

$$\frac{x}{\frac{7}{3}} + \frac{y}{\frac{7}{2}} = 1$$

$$A\left(\frac{7}{3}; 0\right)$$

$$B\left(0; \frac{7}{2}\right)$$

$$\frac{3}{7}x + \frac{2}{7}y = 1$$

RETTA

$$\frac{x - x_A}{x_B - x_A} = \frac{y - y_A}{y_B - y_A}$$

$$(y_B - y_A)x + (x_A - x_B)y + y_A x_B - x_A y_B = 0$$

$$\frac{(x_A - x_B)}{x_A - x_B} y = \frac{(y_A - y_B)}{x_A - x_B} x + \frac{x_A y_B - y_A x_B}{x_A - x_B} \rightarrow y = mx + q$$

$$y = \frac{y_A - y_B}{x_A - x_B} x + \frac{x_A y_B - y_A x_B}{x_A - x_B}$$

$Qx + by + c = 0$
 $b \neq 0 \quad y = -\frac{Q}{b}x - \frac{c}{b}$

Esempio:

m_{AB}

Scrivere il coefficiente angolare di una retta passante per $A(x_A; y_A)$ e $B(x_B; y_B)$:

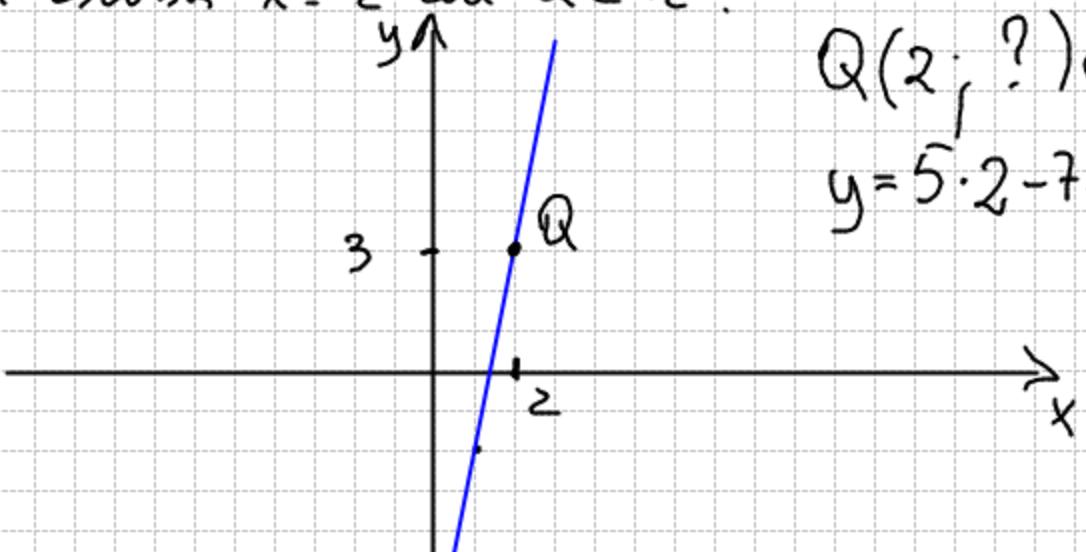

$$m_{AB} = \frac{y_A - y_B}{x_A - x_B}$$

$$\left[m_{AB} = \frac{y_B - y_A}{x_B - x_A} \right]$$

ESEMPIO

Data la retta $r: y = 5x - 7$ e il punto $P \in r P(0; -7)$

Trovare a quale distanza si trova da P il punto Q di ascissa $x = 2$ con $Q \in r$.

$Q(2; ?) \in r \quad r: y = 5x - 7$

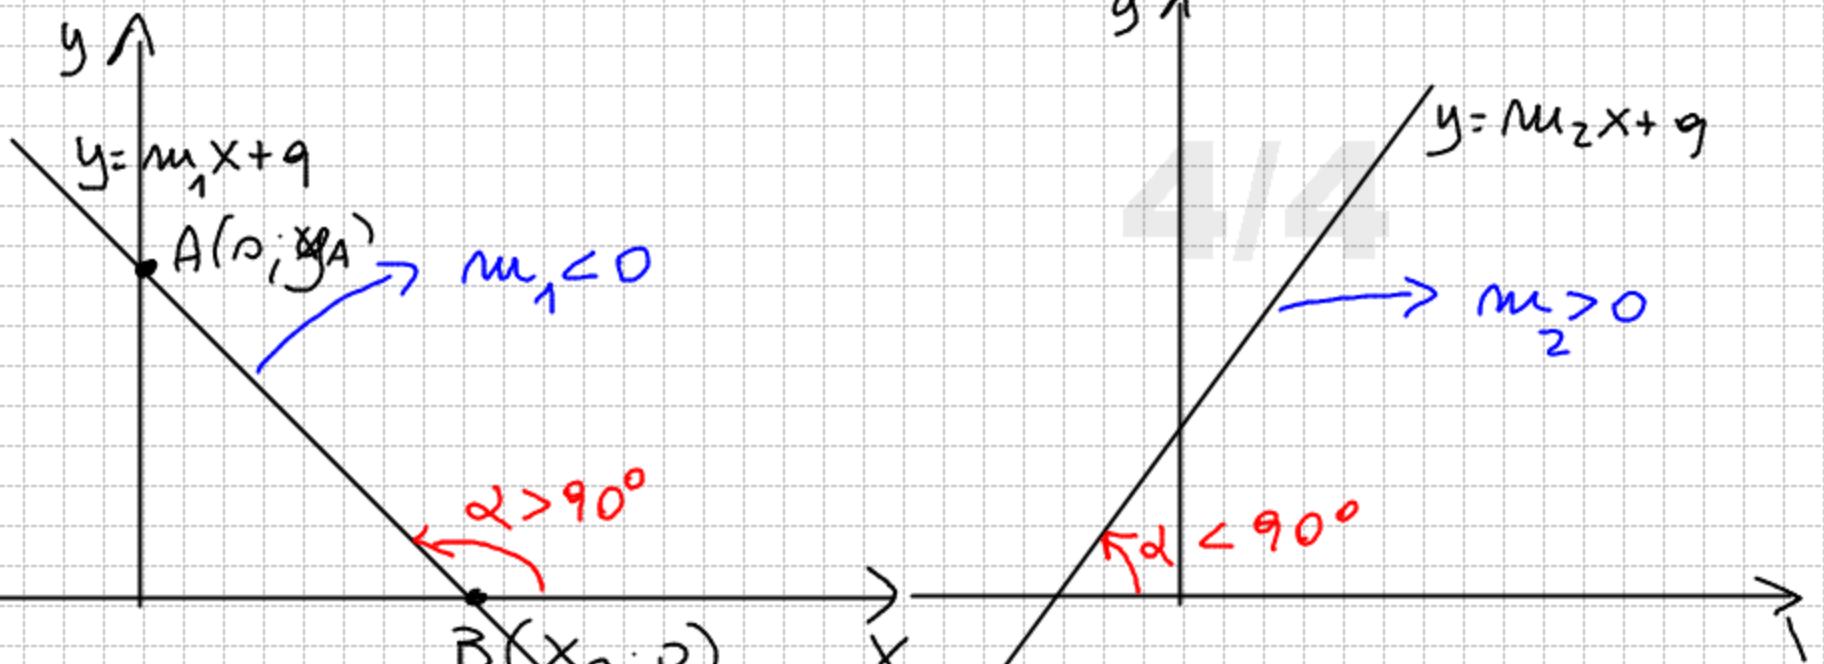

$$y = 5 \cdot 2 - 7 = 3$$

| x | y |
|---|----|
| 0 | -7 |
| 1 | -2 |

$$Q(2; 5 \cdot 2 - 7)$$

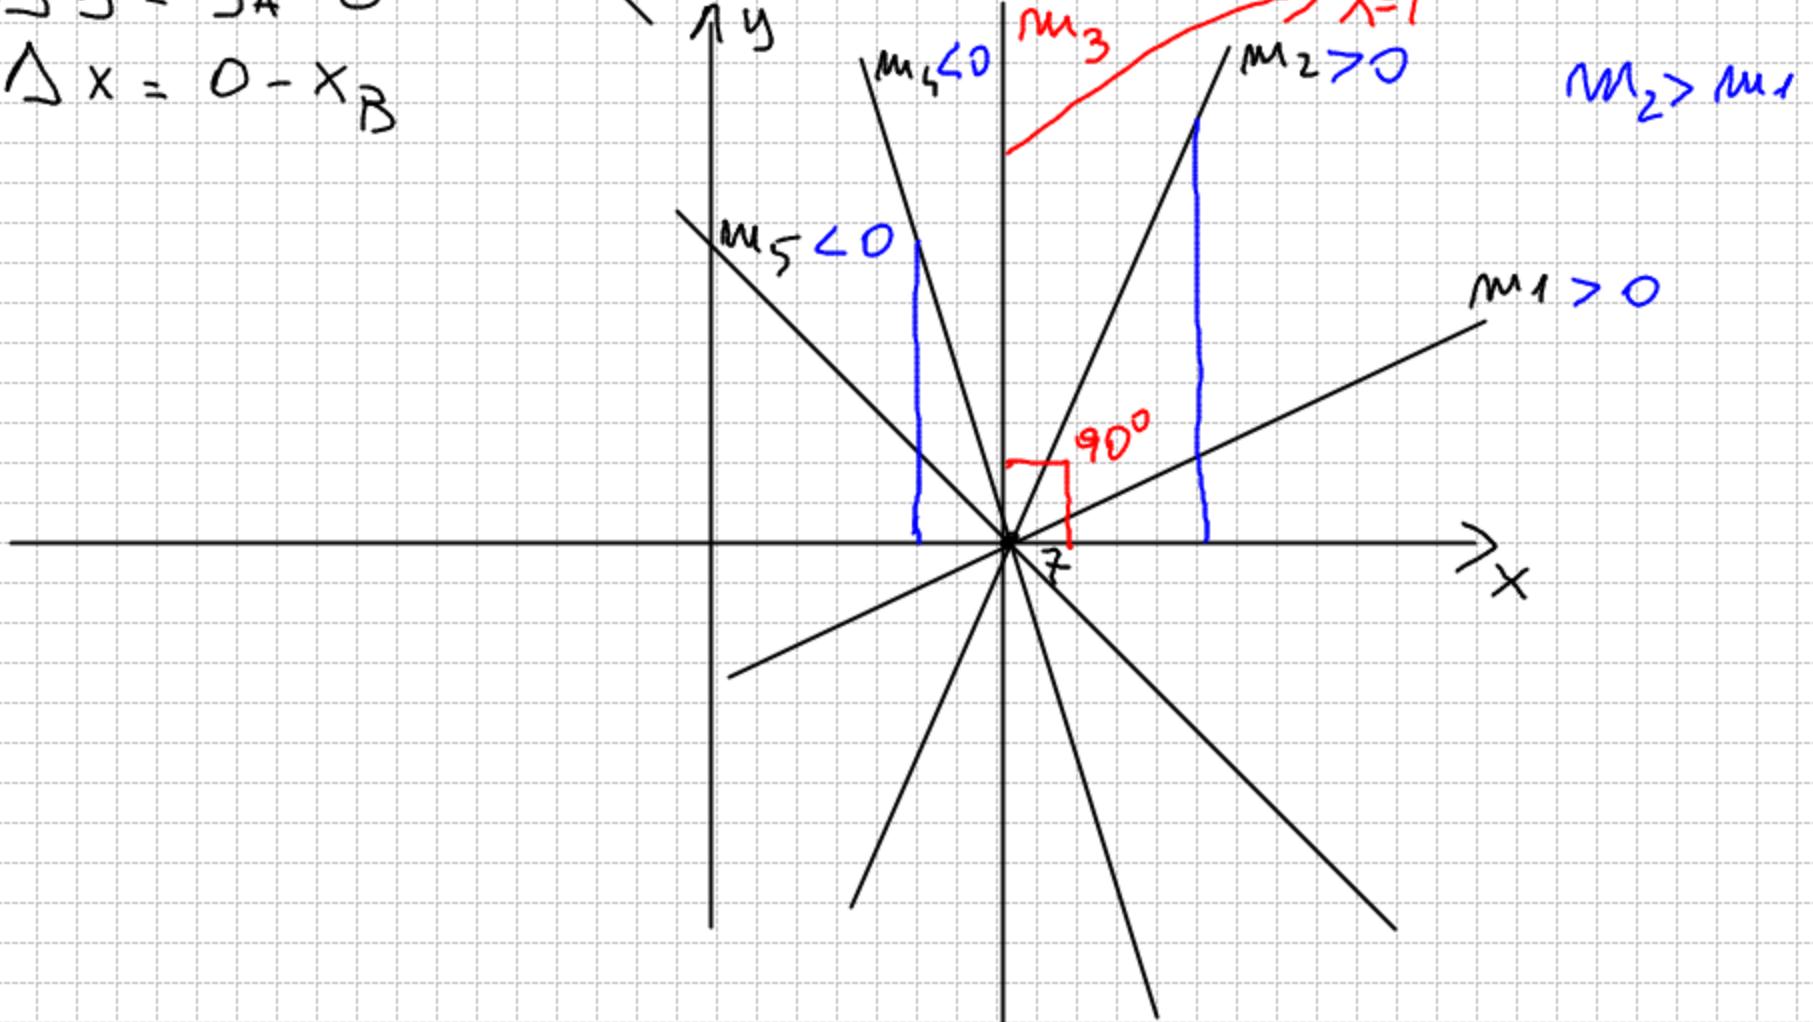

$$Q(2; 3)$$

$$\overline{PQ} = \sqrt{(x_P - x_Q)^2 + (y_P - y_Q)^2} = \sqrt{4 + 100} = \sqrt{104}$$

$$\Delta y = y_A - 0$$

$$\Delta x = 0 - x_B$$

$$\begin{aligned}
 \left. \begin{array}{l} y = mx + q \\ Qx + by + c = 0 \end{array} \right\} &\Rightarrow m = 0 \Leftrightarrow y = q \\
 &\quad m \neq 0 \Leftrightarrow y = mx + q \\
 \left. \begin{array}{l} Qx + by + c = 0 \\ b = 0, Q \neq 0 \end{array} \right\} &\Rightarrow Q = 0, b \neq 0 \Rightarrow y = -\frac{c}{b} \\
 &\quad \Rightarrow b = 0, Q \neq 0 \Rightarrow x = -\frac{c}{Q} \\
 &\quad \Rightarrow Q \neq 0, b \neq 0 \Rightarrow Qx + by + c = 0
 \end{aligned}$$
